Project complexity

Complexity describes the behaviour of a system or model whose components interact in multiple ways and follow local rules, meaning there is no reasonable higher instruction to define the various possible interactions.

1 Technical

Considering the definition of 'technical', the initial high-level profile appears that currently, your organisation does not have all of the necessary capability requirements to deliver this project effectively. You may need to investigate the tools, templates and procedures currently in place, and suggest amendments to improve processes to specifically support your project. Although you have scored 'high' on technical, you can make certain changes and draw on the expertise of others to move to medium or low. Bear in mind, that the technical aspect is only one sub-component of assessing overall project complexity, so be sure to continue answering the questions on 'Economic' and 'Commercial' sections.

2 Economic

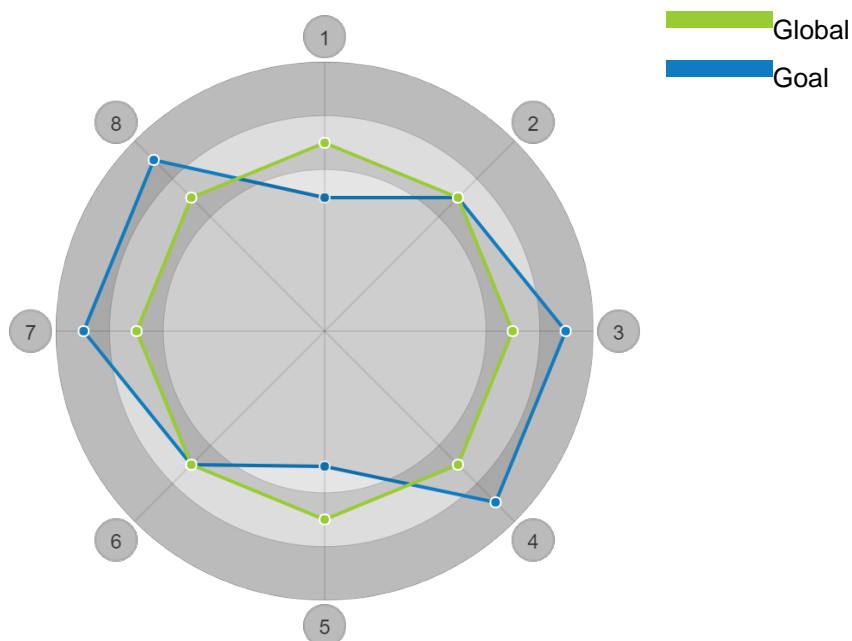

Considering the definition of 'economic' factors affecting the complexity of your project, the initial high-level profile appears that there is insufficient funding and resourcing to execute the project effectively. You will need to develop or reconsider your business case to carefully assess the feasibility of the project. Although you have scored 'high' on economic, you can make certain changes and draw on the expertise of others to move to medium or low. Bear in mind, that the 'economic' aspect is only one sub-component of assessing overall project complexity, so be sure to continue answering the questions on 'Economic' and 'Commercial' sections.

3 Commercial

The initial high-level profiling of your project's commercial aspects appear to show some clarity on the deliverables, contractors and resourcing of your project. It is likely that you have some contracts in place but you will need to secure other contracts and/or resource requirements to meet the critical path of the project. Since the commercial aspect of the project appears to be of 'medium', it is advisable that you ensure a complete understanding of market conditions, meet with contractors to secure their input and resources before moving forward. Bear in mind, that the commercial aspect is only one sub-component of assessing overall project complexity, so be sure to continue answering the questions on 'Technical' and 'Commercial' sections.

Technical

The technical aspect of any project considers the familiarity of the project requirements and the expertise required at the organisational level to ensure that the project is executed successfully.

- 1 Your organisation
No data to display
- 2 Objectives clearly defined
No data to display
- 3 Delivered, clearly understood
No data to display
- 4 Agreed to by the client
No data to display
- 5 Does the organisation have current systems capability to deliver this project?
No data to display
- 6 Are there existing project processes, tools and templates to support the delivery of this type of project?
No data to display
- 7 Have you been part of a project team that has delivered a project of similarly size and scope before?
No data to display
- 8 From the current available project information, do you consider the project to be:
No data to display

Economic

The economic aspect considers some of the initial factors that may significantly impact on the value to be created by undertaking the project.

- 1 For this project, was a business case developed to assess project feasibility?
No data to display
- 2 Has the business case been formally approved?
No data to display
- 3 Has funding been secured for the entire project budget?
No data to display
- 4 Do you believe the project funding to be sufficient for this project?
No data to display
- 5 Does the project rely on the participation of joint venture (or other equity) partner organisations to deliver the project?
No data to display
- 6 Do materials, services, or other resources require international procurement ?
You have not completed this section

Commercial

The commercial aspect considers some of the initial market conditions, together with other commercial requirements necessary in order to secure supply of the necessary resources (i.e materials and labour) to successfully deliver the project.

- 1 Is the project sponsor aware of the deliverables of the project?
No data to display
- 2 Has the project sponsor formally signed off on the project?
No data to display
- 3 Does the organisation have an understanding of deliverables of the project?
You have not completed this section
- 4 For the deliverables of the project, are you reliant on outsourcing to contractors and suppliers, or in-house delivery?
You have not completed this section
- 5 How would you describe the contracting and procurement strategies of the organisation?
You have not completed this section
- 6 Are contract management processes and support systems available for your project?
You have not completed this section

Project environment

Project environment represents a connection, where the project is processed. It impacts the project and is, therefore, conditioned. Such an interaction is provided by numerous factors as operational, physical, ecological, social, cultural, economic, psychological, financial, organizational etc. The environment not only formulates the project but also estimates it.

Governance

Context

Project stakeholders

According to the Project Management Institute (PMI), the term project stakeholder refers to, "an individual, group, or organization, who may affect, be affected by, or perceive itself to be affected by a decision, activity, or outcome of a project" (Project Management Institute, 2013).
